(Lot) has product type (Product)

Product

IRI

<http://www.w3id.org/ecsel-dr#Product>

Definition

A product is any tangible output or service that is a result of a process and that is intended for delivery to a customer or end user. A product is something that is produced with effort (e.g. by mechanical or industrial processes) and sold to a customer. A product is either tangible (physical product) or intangible (service). A set of alternative BOMs might be associated with each product. The manufacturing process is complicated by binning and substitution (in production). Binning refers to the process that an item can become one of several products based on tested levels of performance, for instance, speed.

Equipment

IRI

<http://www.w3id.org/ecsel-dr-S0#Equipment>

Definition

The entity "Equipment" describes the semiconductor equipment of any equipment model. It allocates it to higher level entities and describes the behavior of the equipment.

Equipment Group

IRI

http://www.w3id.org/ecsel-dr-S0#Equipment_Group

Definition

An Equipment Group is a group of same type of machines for production of certain production steps. Each machine is allocated to a group of machines doing similar processes. The equipment groups are described and allocated in the master entity "Equipment Group".
